

Updated Smart contracts (Solidity version 5.9)

DO NOT DOWNLOAD AND USE WITH THE COURSE

These are an updated version of the smart contracts you will see used in this course. However, if you try and take these to use with the examples from the videos and quizzes you will get errors. Download the older versions of the smart contracts (version 0.4.0) from the Course Resource section, or there is a Reading page *before* the Week 1 Quiz that gives the correct versions.

The following zip file includes updated smart contracts versions (Solidity version 5.9). **We did not remove earlier versions from the course resource section, however, as those versions are still required to complete the homework and quizzes. June 2019.**
